

Project Design Phase-II
Solution Requirements
(Functional & Non-functional)

Date	27 September 2026
Team ID	[SWTID-2026-9584]
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Laptop Request Submission	• Submit request via Service Catalog item • Auto-fill department & manager from user profile • Select laptop type (Basic / Developer / Power User)
FR-2	Approval Workflow	• Route request to manager for approval • Auto-approve repeat/standard requests under a cost threshold • Reject with reason & notify requester
FR-3	Automated Task Creation & Assignment	• Auto-create hardware configuration task on approval • Auto-assign task to Hardware team based on location • Set task priority / SLA automatically
FR-4	Status Tracking & Notifications	• Auto-update RITM stage as the task progresses • Notify requester by email at each stage • Provide an IT dashboard of request status
FR-5	Asset & Inventory Update	• Auto-register the configured laptop in the CMDB • Update stock count after dispatch

Non-Functional Requirements

Following are the non-functional requirements of the proposed solution:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple, guided catalog form with auto-filled fields; minimal clicks to submit; clear status visibility for both requester and IT team.
NFR-2	Security	Role-based access control on tasks and approvals; approval routing respects the org hierarchy; every flow action is logged for audit (sys_audit).
NFR-3	Reliability	The flow must trigger reliably on every approved request with no missed task creation, with built-in retry on failed flow actions.
NFR-4	Performance	Task creation and notification should complete within seconds of approval, adding no noticeable delay to the request lifecycle.

NFR-5	Availability	Runs on ServiceNow's cloud platform, inheriting its 99.8% uptime SLA, with no manual step required to keep the flow running.
NFR-6	Scalability	Handles rising request volume (e.g. bulk onboarding drives) without redesign, using reusable Flow Designer subflows and standard tables.
